Convert your Thatch Roof to Shingles for peace of mind:

In St Francis Bay, elements such as fire, lightning, wind and rain have created much concern recently, particularly amongst homeowners with thatch roofs.

The Owens Corning Shingle Roofing System supplied by **Global Innovative Building Systems (PTY) LTD** provides a safe, aesthetically pleasing and low maintenance alternative with many added long term benefits. The System has rigorously been tested for fire safety, achieving the International ULA1 Fire Rating and passing the Local SABS 'burning brands' test.

Due to the flexible and versatile composition of the Shingle, installers are able to cover a wide range of roof geometries including curved pitches and rounded domes. The low-profile interlocking design creates a sealed envelope with excellent wind resistance of up to 200KM/H. All the roofs are designed to comply to SABS and SANS Building Regulations which include insulation, leaving you with a comfortable home throughout the year.

The Shingle Roofing System has many characteristics which will benefit Developers, Architects and Contractors within the Commercial, Residential and Industrial development sectors.

Working together with our Accredited Network of Installers, Global Innovative Building Systems strive to maintain a vision of professionalism. We have created a reputation for providing excellent service and stand by the statement:

'THE VIEW FROM THE ROAD, JUST GOT BETTER'
